

Why Should You Care?

Limit the Spread of Disease

1,000

Amphibians can get rid of
more than

5 Million

insects per year!

Indicate Environmental Problems

Amphibians have
Permeable Skin

This means that their skin is
sensitive to

changes

in their environment,
and can indicate
issues!

Improve Human Health

Compounds from

frog skin

can be used to

treat humans

for pain and
infections.

Balance Ecosystems

Many animals rely on
amphibians for food

Ecosystems can become

Off-Balanced

when there are less
diverse species of
amphibian
communities

**Join the Amphibian Foundation and together we can
fight to save amphibians from extinction!**
